

**THE MONTGOMERY COUNTY OFFICE  
OF HOMELAND SECURITY AND EMERGENCY MANAGEMENT**

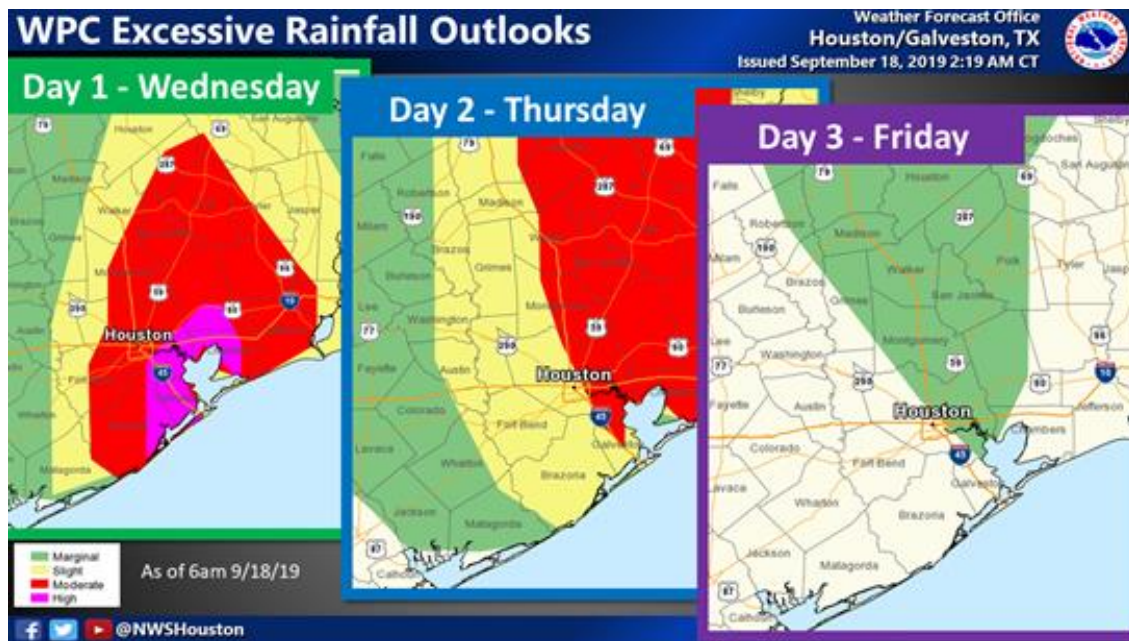

**FOR IMMEDIATE RELEASE:  
September 18, 2019 - 8:00 AM**

## **Tropical Depression Imelda Status in Montgomery County**

*Status Update from the Office of Homeland Security and Emergency Management*

Tropical Depression Imelda continues to move inland over the Southeast Texas. Heavy rain is likely for Montgomery County in the next 24 hours. Flash flooding threat continues across much of the area, and rainfall rates of 2-4"/hour will be the main concerns today.

The heavy rains focused close to the coast should weaken this morning and redevelop further inland over the flash flood watch area. A band of storms will probably develop generally along the I-69 corridor this afternoon. Where the line redevelops is still in question, but should help to focus more intense rains once it develops. The heavy rainfall threat will continue tonight and into Thursday before gradually shifting northeast out of the region Friday.

The Montgomery County Office of Homeland Security and Emergency Management will continue to monitor the upcoming weather conditions, and provide updates as conditions change.
